Economic Review 1992

Number Forty-six

Saskatchewan

Foreword

Saskatchewan's economic performance in 1992 has been hampered by poor quality crops as a result of adverse weather conditions and by the slower than anticipated Canadian economic recovery.

Most crops yielded above their ten year average, but the quality of all crops was reduced as a result of poor growing and harvest conditions. For instance, less than ten per cent of the wheat crop was graded No. 1 and more than one half was graded Canada Feed.

The expected economic recovery in Canada was less than originally forecast. While the Canadian economy has experienced positive growth in the first three quarters of 1992, these increases, 1.0 per cent, 0.4 per cent and 1.4 per cent respectively, have been marginal at best.

Despite these factors, there are positive signs in Saskatchewan's economy that reflect an improving quality of life for Saskatchewan people.

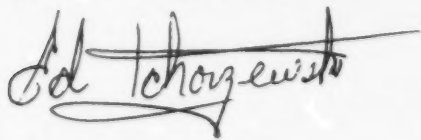

Consumer price inflation remained low over the year. For example, the all-items price index of consumer prices in Regina rose less than one per cent in the first ten months of 1992 compared to a 5.7 per cent increase over the same period last year. In Saskatoon, prices rose less than one half of one per cent, down significantly from last year's increase of 5.8 per cent.

Housing starts have almost doubled when compared to the same period last year; 1462 units started by September 30, 1992 compared to 781 units by September 30, 1991. In addition, the total value of building permits during the first eight months of 1992 increased by over 11 per cent to just over \$230 million.

Saskatchewan continued to have the lowest unemployment rate in the country during the first ten months of 1992. Employment growth in manufacturing was particularly strong. Employment in the construction, finance, insurance and real estate sectors was also up.

Finally, the trend to lower net out-migration which began in 1991 continues. The provincial population is down only marginally from the previous year. During the first half of 1992, net out-migration amounted to only 1,939 people.

These positive signs in Saskatchewan's economy, coupled with the significant measures taken by the Government to begin restoring the Province's financial viability, are reason for hope and optimism. There is an interdependent relationship between economic renewal and financial stability. The Government remains committed to effective financial management. At the same time, it is working to develop a climate for economic renewal with economic development partners in a spirit of co-operation and collective effort.

Honourable Ed Tchorzewski
Minister of Finance

Price: In-Province \$5.00

Out-of-Province \$10.00

World Economic Developments

The world economy has shown signs of revival as North America emerges from the recession. Third quarter economic data provides some optimistic signs that a recovery may be underway. The United States economy posted a 3.9 per cent growth, while the Canadian economy increased by 1.4 per cent during the third quarter of 1992.

In Europe, however, high interest rates coupled with uncertainty about European economic union under the Maastricht Treaty have worked against economic expansion. In addition, the Uruguay round of talks on the General Agreement on Tariffs and Trade (GATT) is experiencing some difficulty as the United States and the European Economic Community attempt to deal with agricultural subsidies. The Uruguay round of talks affects about \$125 billion worth of world trade.

The Canadian Economy

The Canadian economy grew at an annual rate of 1.4 per cent in the third quarter of 1992 following increases of 0.4 per cent in the second quarter and 1.0 per cent in the first quarter. Even with signs of recovery, the number of employed Canadians continues to shrink while the number of unemployed continues to grow. Employment in manufacturing has declined as structural realignment continues to take place within the Canadian economy.

While interest rates have declined significantly since the Spring of 1990, they have been extremely volatile. Interest rates increased again in the Fall of 1992 as the Bank of Canada defended the value of the Canadian dollar, bringing into question the future path of interest rates. As 1992 draws to a close, both interest rates and the Canadian dollar remain volatile.

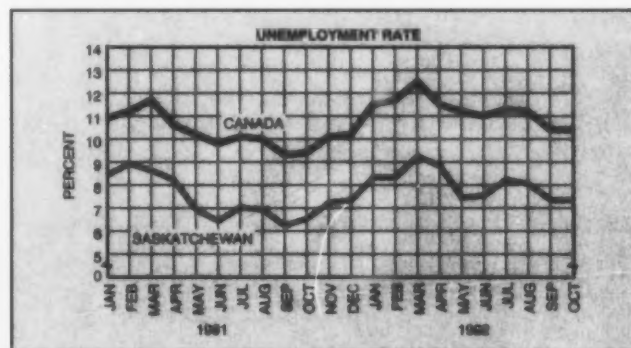

The Saskatchewan Economy in 1992

The provincial economy continued to be adversely affected by slow economic expansion in Canada and the United States. In addition, poor weather conditions during both the growing season and harvest have reduced the quality of Saskatchewan's crops.

Total employment for the January to October period averaged 442,000 persons, down from the same period last year. Agricultural employment was down on average 7,000 persons compared to the first ten months of 1991.

Even with these adverse conditions, employment in the non-agricultural sector was close to 1991 levels. Employment in manufacturing increased by 600 persons for the first ten months of this year. Increased housing starts led to higher construction employment and increased employment in the finance, insurance and real estate sector. Employment in other sectors remained unchanged or was marginally lower during the January to October period compared to 1991.

Saskatchewan continued to have the lowest unemployment rate in the country during the first ten months of 1992. However, the average actual unemployment rate increased to 8.1 per cent over this period from 7.4 percent in the same period in 1991. On a seasonally adjusted basis, Saskatchewan's unemployment rate has averaged 7.9 per cent from January to October 1992.

The provincial population was 994,200 as of July 1, 1992, down marginally from the previous year. Interprovincial and international migration data indicate that 1,939 more people left the province in

the first half of 1992 than entered, down from a net out-migration of 2,157 persons during the first half of 1991. This is a continuation of the trend to lower net out-migration which began in 1991.

Agriculture

Crop production for 1992 was down about ten percent from last year's bumper harvest but up about eight percent from the long-term ten-year average. However, poor growing and harvest conditions brought on by unseasonable weather reduced the quality of most crops. For instance, less than ten per cent of the wheat crop graded No. 1 and more than one-half graded Canada Feed.

Production of the major grains, oilseeds and specialty crops in 1992 is estimated at 22.4 million tonnes, down 9.5 per cent from the 1991 production of 24.7 million tonnes but 8.1 per cent above the 1982-91 average of 20.7 million tonnes. Most crops except for oilseeds and peas yielded above their ten-year average. The 1992 fall plantings of winter wheat and fall rye are up slightly from last year, reversing an acreage decline that began in 1985. The current fall plantings are still short of the ten-year planting averages.

Spring wheat production was down slightly to 13.9 million tonnes while durum production slipped by more than 30 per cent to 2.5 million tonnes. Oats production nearly doubled over 1991 while barley and rye production fell. The production of flax was halved while canola production was off nearly 20 per cent from 1991 production levels. All crops experienced grade degradation from 1991.

The number of cattle and calves on Saskatchewan farms as of July 1, 1992 totalled 2.3 million, up three

per cent over the previous year. Hog numbers were estimated at 825 thousand head, down one per cent from a year earlier. Sheep and lambs were estimated at 90 thousand head, down two percent from July 1991.

Cattle and hog prices have basically remained unchanged from 1991. Total farm cash receipts from 1992 are forecast at \$4.35 billion, up more than 8 per cent from last year.

Natural Resources

Natural resources play a large role in Saskatchewan's economy. Exports of crude oil, natural gas, potash and uranium account for about one third of all exports.

So far this year a total of 565 wells have been drilled to the end of October, down from the 950 drilled last year at this time. Oil prices have remained around \$100 per cubic metre and, with marginal growth in prices, drilling for oil has declined. During the first eight months of 1992 the volume of sales is up 5.9 per cent while the value of sales is up 12.5 per cent.

The volume of potash sales for the first eight months of 1992 is more than 4 per cent ahead of the same period last year. This increase in sales is taking place at the same time as prices have begun to move up. The price for a tonne of potash has begun to move towards pre-1990 levels.

The volume of uranium sales for the first nine months of 1992 rose about 2 per cent above the same period last year. Most uranium sales take place under long-term contracts.

Construction

The total value of building permits issued in Saskatchewan during the first eight months of 1992 was up over 11 per cent from 1991 to just over \$230 million. The value of residential and industrial permits was up while the value of commercial, institutional and governmental permits was down.

The increase in residential permits reflects increased housing starts to the end of the third quarter. Combined urban and rural housing starts of 1462 units almost doubled the 781 units started to the end of September 1991.

Farm Cash Receipts Derived From The Sale of Agricultural Products Saskatchewan, 1991

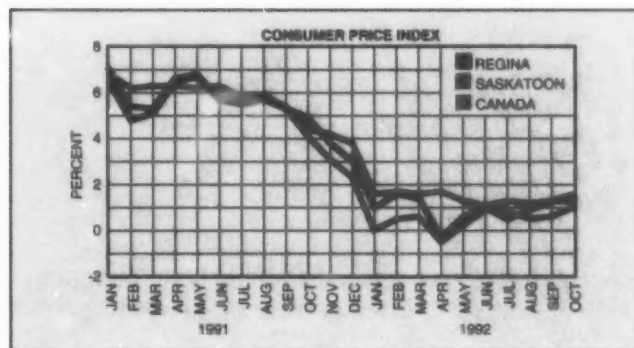

Manufacturing

The value of manufacturing shipments slipped 2.7 per cent during the first eight months of 1992. Sales of fabricated metal products were off by more than 30 per cent during the first eight months of 1992.

Manufacturing activity should improve for the remainder of 1992 with the opening of the Saferco fertilizer plant at Belle Plaine, the Meadow Lake pulp mill and the completion and start-up of the Husky heavy oil upgrader at Lloydminster.

Prices

Consumer price inflation has remained low in 1992. The all-items index of consumer prices in Regina rose less than one per cent, on average, in the first ten months of 1992 compared to a 5.7 per cent average increase over the same period last year. Saskatoon prices rose less than one half of one per cent during this period, down markedly from the 5.8 per cent average increase for the first ten months of 1991.

Saskatchewan Economic Accounts

The Saskatchewan Bureau of Statistics has developed a set of economic accounts which can be used to trace the development and growth of the Saskatchewan economy.

The purpose of the accounts is to measure the value of economic activity in each sector of the economy. This is done by means of a balancing set of accounts similar to the annual income and expenditure statements of a commercial enterprise.

The accounts have many useful functions. They consolidate information which is now provided through a number of scattered sources and organize it into a central framework. This allows many kinds of economic analysis to be performed ranging from monitoring current economic performance to analysis of structural change in the economy.

The Saskatchewan Bureau of Statistics has available upon request, many more detailed tables and other information concerning the Saskatchewan Economic Accounts.

Saskatchewan Economic Accounts

Saskatchewan Gross Domestic Product (GDP) measures the total value of goods and services in the province. By removing the effects of inflation, it is possible to measure the volume of output.

In 1991 the economy declined by 1.7 percent. After adjusting for price changes Saskatchewan's real Gross Domestic Product increased by 0.7 percent. Total gross fixed capital formation increased 0.6 percent over 1990. Within this category a large increase was observed in business investment in machinery and equipment. Exports increased 6.8 percent over 1990. This increase largely reflected a rise in the volume of grain exports.

Final domestic demand for goods and services by individuals, the government, and for investment purposes declined by 0.8 percent in 1991, after adjustments for

inflation. Personal expenditures on consumer goods and services declined by 2.0 percent in 1991. Real government expenditure on goods and services increased by 1.0 percent. Real gross fixed capital formation increased marginally over 1990 levels. Government investment declined in all areas while business investment recorded advances in all categories with the exception of residential construction.

This document represents an update to the economic accounts since the release of the government's annual Economic and Financial Position of September 1992. Periodic revisions are common to all economic series to improve the accuracy, reliability and consistency of the data.
